Name:

UI Replication Activity

General Instructions: Recreate the provided profile UI in Flutter, ensuring accurate UI replication, proper use of widgets, variable-based data, appropriate data types, image assets, and fallback values for missing data.

Grading Criteria:

Criteria	Description	Points	Score
UI Replication Accuracy	Accurately reproduces the provided game UI, including overall structure, positioning, proportions, and major elements.	**30**	
Widget & Layout Structure	Correctly uses `Text`, `Column`, `Row`, `Card`, and appropriate layout widgets to construct the UI.	**20**	
Data Variables	All displayed data is declared as variables and uses appropriate data types.	**20**	
Dynamic Data Display	Variables are properly connected to the UI so changing the data changes the displayed content.	**10**	
Fallback / Missing Data	Missing or unavailable data has appropriate fallback values or visuals instead of leaving a broken/empty UI.	**10**	
Assets & Images	Correctly uses project assets and displays the required images, preferably through image variables.	**5**	
Styling & Visual Details	Applies appropriate colors, typography, spacing, borders, cards, and other visual details from the reference.	**5**	
Total		**100**	

Icon Hints:
person, play_circle, dark_mode, mobile_friendly, monitor, search
